

When paying by credit card, payment processing (including the card number input) takes place on a secure page of the processing system, which has passed the international certification. This means that your confidential data (card details, registration data, etc.) do not enter the online store, their processing is fully protected and no one, including our online store, cannot get the client's personal and bank details.

When working with card data, the standard of information protection developed by the international payment systems Visa and MasterCard — Payment Card Industry Data Security Standard (PCI DSS) is used, which ensures the safe processing of Bankcard details of the Holder. The data transmission technology applied guarantees the security of Bankcards transactions using the protocols Secure Sockets Layer (SSL), Verified by Visa, Secure Code, and closed banking networks with the highest degree of protection.

In case of a refund, the money is returned to the same card through which the payment was made.

Attention! Dear customers, we inform you that when requesting a refund in case of the purchase refusal, the refund is made only to the same Bankcard from which the payment was made!
